TITLE:	UPDATE ON MPOX (MPX) IN NIGERIA
SERIAL NUMBER:	19
EPI-WEEK:	19
DATE:	May 14, 2023

Table 1 – Key Indicators

Reporting Year	Reporting week	Suspected cases	Confirmed cases	Deaths (Confirmed cases)	Case Fatality Ratio (CFR)	States Affected (Confirmed cases)	LGAs Affected (Confirmed cases)
2023 Current	Week 19	32	4	0	0.0	1	3
2023 Cumulative	Week 19	680	78	2	2.6	18 +FCT	51
2022 Cumulative	Week 19	51	19	0	0.0	8 + FCT	13

Highlights

- In week 19, the number of new suspected cases is 32, compared with 19 cases reported in week 18, 2023. These were reported from nine (9) States and FCT– Ogun (15), FCT (5), Ondo (3), Bayelsa (2), Taraba (2), Benue (1), Ebonyi (1), Lagos (1), Abia (1) and Katsina (1) across 17 Local Government Areas.
- Since week 1 of 2023, eighteen (18) States and FCT have recorded at least one confirmed Mpox case across fifty-one (51) Local Government Areas. In 2023, the States with the highest burden are Lagos (28.2%), Ogun (19.2%), Abia (7.8%), Imo (6.4%) and Edo (5.1%), contributing 66.7% of confirmed cases.
- The number of confirmed cases is four (4) in week 19, 2023, compared with two (2) confirmed cases reported in week 18, 2023.
- No death was recorded in week 19, with a CFR of 0.0% same as CFR of 0.0% that was reported in week 18, 2023.
- Overall, since the re-emergence of Mpox in September 2017, 3315 suspected cases have been reported from 36 States and FCT in the country. Of these 3315 suspected cases, 1066 (32.2%) were confirmed (with males predominantly affected) from 34 States and FCT. seventeen (17) deaths have been recorded since the re-emergence in 2017.
- The National Mpox multi-partner, multi-sectoral Technical Working Group (TWG) continues to coordinate the response activities at all levels.

34	Zamfara	0	0	0	0	0	1	0	1
35	Yobe	0	0	0	0	0	1	0	1
	Grand Total	88	49	47	8	34	762	78	1066

Response activities

Pillar	Activities to date	Next steps
Coordination	<ul style="list-style-type: none"> Facilitating the smooth running of the weekly Mpox technical working group meetings Providing offsite subnational support to resolve issues in reporting States 	<ul style="list-style-type: none"> Follow-up implementation of the approved Incident Action plan activities in collaboration with other pillars
Surveillance	<ul style="list-style-type: none"> Thirty two (32) suspected Mpox cases were reported from 9 States and the FCT Four confirmed cases were recorded 	<ul style="list-style-type: none"> Continue to support all State Surveillance teams to ensure on SORMAS
Laboratory	<ul style="list-style-type: none"> The sample positivity rate for Mpox is 13% and 56% for Varicella-Zoster Virus (VZV) 71% of samples meet overall turnaround (time sample was collected from the States to the time when the result was shared with the States) 	<ul style="list-style-type: none"> Continue to support effective sample management and transportation to the NRL from health facilities across the country

Notes on this report.

Data Source

Information for this disease was case-based data retrieved from the National Mpox Emergency Operations Centre.

Case definitions

Suspected case

- An acute illness with fever $>38.3^{\circ}\text{C}$, intense headache, lymphadenopathy, back pain, myalgia, and intense asthenia followed one to three days later by a progressively developing rash often beginning on the face (most dense) and then spreading elsewhere on the body, including soles of feet and palms of the hand.

Probable case

...PROBABLE CASE WITH A HISTORY OF NIGERIANS

- A case that meets the clinical case definition is not laboratory-confirmed but has an epidemiological link to a confirmed case.

Confirmed case

- A clinically compatible case that is laboratory confirmed

Contact

- Any person who has been in direct or indirect contact with a confirmed case since the onset of symptoms, i.e., contact with skin lesions, oral secretions, urine, faeces, vomitus, blood, sexual contact, sharing a common space (anyone who has been in proximity with or without physical contact with a confirmed case)

Calculations

- Case Fatality Rate (CFR) for this disease is reported for confirmed cases only.
