Lassa Fever Situation Report

Epi Week 24: 8th – 14th June 2026

Key Points

Table 1: Summary of the current week (24), cumulative Epi week 1-24, 2026 and comparison with the previous year (2025)

Reporting Period	Suspected cases	Confirmed cases	Probable cases	Deaths (Confirmed cases)	Case Fatality Rate (CFR)	States and LGAs affected (Confirmed cases)
Current week (week 24)	149	13	0	2	15.4%	State(s):5 LGA(s):9
2026 Cumulative (week 24)	5801	868	5	216	24.9%	State(s):23 LGA(s): 110
2025 Cumulative (week 24)	5678	766	7	145	18.9%	State(s):18 LGA(s): 96

Highlights

- In week 24, the number of new confirmed cases is the same with Epi week 23. These were reported in Ondo, Edo, Bauchi, Taraba and Benue States (Table 3).
- Cumulatively, 216 deaths have been reported with a Case Fatality Rate (CFR) of 24.9% which is higher than the CFR for the same period in 2025 (18.9%).
- In total for 2026, 23 States have recorded at least one confirmed case across 110 Local Government Areas (Figures 2 and 3).
- Eighty-five percent (85%) of all confirmed Lassa fever cases were reported from 5 states (Ondo, Bauchi, Taraba, Edo and Benue) while fifteen percent (15%) were reported from 18 states with confirmed Lassa fever cases. Of the 85% confirmed cases, Ondo reported 29%, Bauchi 25%, Taraba 15%, Edo 10% and Benue 6%.
- The predominant age group affected is 21-30 years (Range: 1 to 93 years, Median Age: 30 years). The male-to-female ratio for confirmed cases is 1:0.9 (Figure 4).
- The number of suspected and confirmed cases increased compared to that reported for the same period in 2025.
- One new healthcare worker was affected in the reporting week 24.
- National Lassa fever multi-partner, multi-sectoral Incident Management System (IMS) activated to support the coordination of response activities at all levels.

Figure 1. Confirmed Lassa Fever Cases in Nigeria Epidemiological Week 24, 2026

Figure 2. Confirmed Lassa fever cases by States in Nigeria, week 24, 2026

Figure 3. Confirmed Lassa fever attack rate per 100,000 population for LGAs in Nigeria, week 24 2026

Table 2: Key indicators for the current week in 2026 and trend compared to the previous week, Nigeria

Symptomatic contacts	Number for current week	Trend from previous week	Cumulative number for 2026
Probable cases	0	↔	5
Health Care Worker affected	1	↑	47
Cases managed at the treatment centres	11	↑	652
Contact tracing			
Cumulative contact listed	26	↑	1787
Contacts under follow up	53	↑	53
Contacts completed follow up	0	↓	1731
Symptomatic contacts	0	↔	109
Positive contacts	0	↔	49
Contacts lost to follow up	0	↔	3

Figure 5: Number of confirmed cases with Case Fatality Rate (CFR) by state week 24, 2026

Figure 6: Trend of confirmed cases by epidemiological week, 2022– 2026, Nigeria

- Held a review of the National Case Management Guidelines (Workshop I) with the support of WHO
- Conducted workshop to strengthen State IPC programmes for Akwa-Ibom, Bauchi, and Lagos States
- Held the scheduled capacity building for 62 IPC focal persons across Lassa Fever ring facilities in Ebonyi and Ondo States, focusing on screening, triage, and prevention, with support from WHO.
- Incident Management System of the Public Health Emergency Operations Centre activated in Oyo State
- Risk Communication and Community engagement with religious and traditional leaders in Edo State and Ondo state
- IPC training for Health Care Workers from 5 Lassa fever endemic LGAs in Ondo state with the support of ALIMA (The Alliance for International Medical Action)
- Sensitization of farmers and market women in collaboration with National Orientation Agency in Ondo state
- Developed a 30-day Healthcare Worker Protection Plan for Lassa fever to curb infections among frontline healthcare workers in endemic states with the support of WHO, and US CDC
- Led a high-level advocacy to Benue State with the support of WHO, UNICEF and MSF
- Released a joint advisory for Medical Doctors and healthcare workers to bolster ongoing efforts for Lassa fever control and management
- Held a meeting with the Nigerian Medical Association (NMA) to strengthen collaborative efforts
- Piloted a targeted IPC Ring Strategy intervention in Benue State with the support of WHO
- Supporting high burden states with active case search and contact tracing in collaboration with the Research Triangle Institute (RTI) International through US CDC funding
- Held a National press briefing for Lassa fever
- Supported the integrated case management training in Taraba state with the support of WHO
- Disseminated of updated IPC guidelines, SOPs as reminders for HCWs adherence
- Prepositioned PPE and distributed to health facilities
- Activation of Incident Management System for Lassa fever in Kebbi, Kano, Gombe states
- Held the inaugural Joint Clinical Fellows Meeting (LFCMF Cohorts I & II) with the support of Georgetown University and US CDC.
- Administered the RCCE need assessment questionnaire across the National Rapid Response Teams (NRRT) deployed states
- Deployment of NRRT across 7 high burden states for the outbreak with the support of the BHCPF
- Held a pre-deployment briefing to ensure teams were adequately prepared for outbreak containment in the field
- Conducted a high-level field mission to Bauchi State with the support of Médecins Sans Frontières (MSF)
- Pilot implementation of the Turn a State Orange (TASO) Programme in Enugu, Oyo, and the FCT in collaboration with DRASA
- Collaborated with Logistic pillar to facilitate the distribution and pre-positioning of PPE at facilities with active and previous healthcare worker infections
- Technical support from US CDC and Pro-Health International to investigate and mitigate healthcare worker infections
- Identifying challenges and providing solutions to all states sending situation reports
- Treatment of confirmed cases at identified treatment centres across the states
- The APIN Orange Network is strengthening the capacity of health facilities in conducting Hand Hygiene Audits and implementing hand hygiene improvement programmes
- Analysed samples across the Laboratory network for Lassa fever to guide prompt diagnosis and treatment
- Supporting the implementation of the Community-based One Health Participatory and Empowerment (COPE) Phase II collaboration with RKI
- Shared soft copies of Lassa Fever (LF) Social Behavioural Change (SBC) materials with State Health Promotion Officers (SHPOs) and other RCCE stakeholders
- Continued collaboration post-lecture on LF in the 2025 Nigerian Medical Students' Association (NiMSA) conference
- Activation of Incident Management System (IMS) in Benue State and Plateau State
- Supply of Lassa fever IPC commodities & drugs to BSUTH treatment & isolation centre with support from WHO
- Engaged with all stakeholders across the national and subnational Ministries of environment to prevent and control Lassa fever outbreaks

Challenges

- Late presentation of cases leading to an increase in CFR
- Poor health-seeking behaviour due to the high cost of treatment and clinical management of Lassa fever
- Poor environmental sanitation conditions observed in high-burden communities
- Poor awareness observed in high-burden communities
- Healthcare workers infection

Recommendations

- **States-** Bolster efforts all-year-round for community engagements on prevention of Lassa fever
- **Healthcare Workers-** Maintain high suspicion for Lassa fever and initiate timely referral and treatment, and adhere to standard infection prevention and control procedures.
- **NCDC/Partners-** Strengthen state capacity to prevent, detect and respond timely to Lassa fever

Notes on this report

Data Source

Information for this disease was case-based data retrieved from the National Lassa Fever Technical Working Group.

Case definitions

- **Suspected case:** any individual presenting with one or more of the following: malaise, fever, headache, sore throat, cough, nausea, vomiting, diarrhoea, myalgia, chest pain, hearing loss and either a. History of contact with excreta or urine of rodents b. History of contact with a probable or confirmed Lassa fever case within a period of 21 days of onset of symptoms OR Any person with inexplicable bleeding/haemorrhage.
- **Confirmed case:** any suspected case with laboratory confirmation (positive IgM antibody, PCR or virus isolation)
- **Probable case:** any suspected case (see definition above) who died or absconded without collection of specimen for laboratory testing
- **Contact:** Anyone who has been exposed to an infected person, or to an infected person's secretions, excretions, or tissues within three weeks of last contact with a confirmed or probable case of Lassa fever

Calculations

- Case Fatality Rate (CFR) for this disease is reported for confirmed cases only.
